Deputy Registrar-General.

TO HON. W. J. HANNA,

Registrar-General of Ontario.

REPORT UPON

Births, Marriages and Deaths

FOR THE YEAR 1914

This is the Forty-fifth Annual Report of vital statistics for the Province of Ontario, for the year ending December 31st, 1914. It shows an increase in the number of births registered during the year and a decrease in the number of marriages and deaths.

The following table shows the total registrations and makes a comparison between the number of registrations for 1913 and 1914:

—	1914	Ratio.	1913	Ratio.

POPULATION.

The estimated population of Ontario for 1914 was 2,749,840. Of this, the cities contain 1,002,320, or 36.3 per cent. of the total. The towns of over 5,000 population have 160,495 or 5.8 per cent., while rural Ontario contributes 57.8 per cent. of the whole.

It will be noted that the rates per 1,000 of population are considerably higher in the city and town municipalities than in the rural municipalities.

For the sake of comparison with other years the following table showing the total Births and Deaths in Ontario, excluding still-births, for each of eighteen years, and the ratio per 1,000 of population is appended.

BIRTHS.

The births registered during the year were 66,225, a ratio of 24.0 per 1,000 of population. This is the same rate as for 1913.

The cities contributed 42.6 per cent. of all births. The towns of over 5,000 population, 6.9 per cent., and rural Ontario, 50.7 per cent.

ILLEGITIMATE BIRTHS.

The total number of illegitimate births registered was 1,469, an increase of 75 over the preceding year. Of every 1,000 births which occur in Ontario, 22.3 are illegitimate. As usual, the cities contributed the larger number, 1,074, or over 73.1 of the whole, being at the rate of 38.4 per 1,000 births. The towns gave 73 or 4.9 per cent. of the whole, being at the rate of 15.8 per 1,000 births. Rural Ontario gave 322 or 21.9 per cent. of the whole, being at the rate of 9.5 per 1,000 births.

MULTIPLE BIRTHS.

There were 759 pairs of twins born; 805 of these children being males and 713 females. Of these the cities contributed 310 and the towns 52 pairs of twins. Seven sets of triplets were registered; 9 boys and 12 girls. One case occurred in Saulte Ste. Marie; one in Toronto and one in Niagara Falls. One case each occurred in the Counties of Kent, Lincoln, Renfrew and Timiskaming District.

Of all births registered, 34,031 were males and 32,194 females; or 1,050 boys to 1,000 girls.

MARRIAGES.

The number of marriages registered during the year 1914, was 24,245, or 8.8 per 1,000 of population. This number is 2,753 less than that of the preceding year, or 1.2 less per 1,000 of population.

The largest ratio is shown in Welland and Essex Counties where the Cities of Niagara Falls and Windsor respectively, are situated. In spite of the amendment in The Act respecting the Solemnization of Marriages, a considerable number of parties continue to come from the United States to be married in Canada. The Department is very particular in examining all affidavits received in registered licenses and there does not seem to be any direct evidence that the law is being evaded. It must be admitted, however, that a suspicion is prevalent in the Department that there is an indirect evasion in the City of Niagara Falls. In Windsor, however, the law is complied with in all respects.

The following table will show how this amendment to The Marriage Act has affected the ratio of marriages in the cities just referred to during the year 1912, prior to the amendment, in 1913, when the amendment was adopted (May, 1913) and in 1914 when it was in force during the entire year.

	1912 Marriages	Ratio per 1,000	1913 Marriages	Ratio per 1,000	1914 Marriages	Ratio per 1,000
Niagara Falls	839	86.7	492	40.9	291	24.9
Windsor	3,429	176.2	1,423	65.8	622	27.6

The ratio of marriages per 1,000 of population in these cities is still twice as high as the average 12.5, for the city municipalities.

The following table shows the marriages by denominations and the number of men and women claiming adherence to the denominations.

DEATHS.

The total number of deaths registered in the Province for 1914 was 32,440, being a ratio of 11.8 per 1,000 of population. This is a decrease of 1,877 deaths and a decrease of .9 in the ratio.

The ten most active causes, excluding congenital debility and old age, were:

		Per cent. of total deaths.
Organic Heart Diseases	2,972	9.1
Tuberculosis	2,340	7.2
Pneumonia	2,009	6.1
Cancer	1,914	5.9
Apoplexy	1,306	4.0
Infantile Diarrhoea	1,215	3.6
Diseases of the Arteries	1,093	3.3
Bright's Disease	1,022	3.1
Paralysis	558	1.7
Infantile Convulsions	497	1.5

When one is making a comparison of death rates in any rural municipality it should be borne in mind that each county municipality includes any city, town or towns which may be in that county, and to obtain the county rate only, this must be considered, e.g., York County, including Toronto, shows 6,537 deaths with a rate of 11.8 per 1,000; the same county, excluding Toronto, has a ratio of 12.1 per 1,000. Carleton County, including Ottawa, has a death rate of 11.8 per 1,000 of population; excluding Ottawa, the rate is 17.3.

The death rate from organic diseases of the heart is higher than in the preceding year (2,829). The same is true of cancer (1,806).

TUBERCULOSIS.

Tuberculosis continues to occupy a most prominent place as a cause of death.

The number of deaths due to this cause in 1914 was 2,340, being 46 more than for 1913. While there was a slight increase in the number over that of the preceding year, the ratio per 100,000 of population has remained unchanged, being 85.

The following table is of interest in comparing population and deaths from tuberculosis:

	Deaths.	%	Population.	%	Ratio per 100,000 population.
Total	2,340	100	2,749,840	100	85
City Municipalities.....	873	37.30	1,002,320	36.40	87

Rural Municipalities.....	1,294	55.30	1,587,025	57.76	81

Following will be found tables showing deaths from tuberculosis over a period of 10 years:

INFANT MORTALITY.

The number of children who died during 1914 under the age of 5 years was 8,516, as compared with 9,515 for the preceding year. This is a decrease of 999. The decrease took place in the first three years of age, while increases occurred in the latter two.

	Total	Under 1	1	2	3	4
1913	9,515	7,596	992	447	274	206
1914	8,519	6,835	808	359	305	212

In 1913, the deaths under one year amounted to a ratio of 117.7 per 1,000 births; in 1914, the ratio dropped to 103.2. This is most gratifying.

The following table shows a comparison of the death rates per 1,000 births, between 1913 and 1914.

	1913	1914
Whole Province.....	117.7	103.2
City Municipalities.....	140.3	115.9
Town Municipalities	148.3	129.9
Rural Municipalities	95.7	88.8

Excluding cities and towns

It will be observed that while the death rate in the whole Province falls much below that of cities and towns, the latter carries the highest rate of all, while that of the rural districts is lowest. It seems that the reasons for the higher death rate in towns is due to the fact that in towns less attention is paid to sanitary conditions than is the case in cities. In most cities there is a full-time medical officer of health, the supply of milk is controlled by by-law which provides for inspection of the milk and of the dairies. In some of the cities, notably Toronto, all milk is pasteurized, supplied in bottles and distributed in a most satisfactory manner. In a large number of towns, the medical officer of health is paid but a mere pittance for his services and has little or no incentive to carry out his duties properly. It is a notorious fact that the milk supply of many of our towns is scandalously filthy and consequently about as dangerous a poison as could be given a child. In addition, while cities screen and promptly dispose of manure and garbage, thus preventing the breeding of flies; in most of the smaller towns nothing is done to limit the swarming of these disease-carrying insects. In the rural districts the milk is fed fresh to children, before the disease germs have had time to multiply. The effect of the pasteurization of milk is apparent in the low death rate among infants in cities like Toronto.
